ARKD

ARK 21Shares Blockchain and Digital Economy Innovation ETF

Factsheet as of June 30, 2025

WHY ARKD?

Growth Potential

Bitcoin was the first decentralized currency and is the largest digital asset by market cap (at over $2.1T*). It is well established as a digital store of value with a broad user-base and ample liquidity. ARKD offers a vehicle for this long-term strategic holding.

* Source: Coingecko. Data as of June 30, 2025.

A Holistic Approach

By offering exposure to bitcoin futures as well as public equities and other assets that may benefit from the growing adoption of blockchain and digital assets, ARKD offers a more holistic entry point into the market, with actively managed allocations to help optimize performance.

Built for Growth

As the digital asset ecosystem grows, the opportunities for investment will increase. ARKD is built to grow along with the opportunity set, with flexibility to invest in a broad array of instruments that may capture value in the future.

Quality-driven

As an actively managed ETF, ARKD navigates the limited universe of blockchain-oriented public equities through a proprietary valuation model, constructing a concentrated, high-conviction portfolio.

INVESTMENT OBJECTIVE

The Fund's objective is capital appreciation.

FUND STRATEGY

ARKD aims to optimize performance through actively managed allocations to bitcoin futures, ether futures, and concentrated positions in the equities of companies engaged in the blockchain industry and/or digital economy, which represent our highest-conviction investment ideas. At a neutral weighting, the Fund is equally allocated to futures and equities though it may allocate up to 80% to either bitcoin futures or other assets. The Fund may invest up to 25% in ether futures. The Fund does not invest directly in bitcoin, ether, or other digital assets, or maintain direct exposure to "spot" bitcoin or "spot" ether.

The performance data quoted represents past performance and is no guarantee of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. For the most recent month-end performance, please call 646-370-6016 or visit the Fund's website at www.21shares.com.
Investing involves risk, including the possible loss of principal. Shares of any ETF are bought and sold at market price (not NAV) and may trade at a discount or premium to NAV. Shares are not individually redeemable from the Fund and may only be acquired or redeemed from the fund in creation units. Brokerage commissions will reduce returns.

Read the prospectus or summary prospectus carefully before investing.

Bitcoin and Bitcoin Futures, are relatively new investments which have unique and substantial risks and which may be more volatile than other types of investments. The value of an investment in the Fund could decline significantly and without warning, including to zero. You may lose the full value of your investment within a single day. If you are not prepared to accept significant and unexpected changes in the value of the

[1] Other Expenses are estimated for the current fiscal year. The Fund cannot accurately estimate anticipated current and 3 deferred tax expenses prior to the commencement of investment operations.

Fund and the possibility that you could lose your entire investment in the Fund you should not invest in the Fund. The performance of Bitcoin Futures may differ from the performance of Bitcoin.

Bitcoin Futures Risks. Bitcoin Futures expose the Fund to the following risks:

● Bitcoin, Bitcoin Futures, are relatively new assets and Bitcoin and the Bitcoin network are subject to rapid changes, uncertainty and regulation that may adversely affect the value of the Bitcoin Futures or the nature of an investment in the Fund, and may adversely affect the ability of the Fund to buy and sell Bitcoin Futures or achieve its investment objective.

● Historically, Bitcoin and Bitcoin Futures have been subject to significant price volatility. The price of Bitcoin Futures may differ significantly from the spot price of Bitcoin and changes in the price of Bitcoin Futures Futures may happen rapidly and without notice.

● The market for Bitcoin Futures is less developed than older, more established futures markets (such as corn or wheat futures) and may be more volatile and less liquid than other futures markets. Although this market has grown since Bitcoin Futures were initially developed, there is no guarantee that the market will continue to develop in ways that support the continued growth and operation of the Fund.

The value of Bitcoin depends on the development and acceptance of the Bitcoin. The slowing or stopping of the development or acceptance of the Bitcoin network may adversely affect an investment in the Fund.

New competing digital assets may pose a challenge to Bitcoin current market position, resulting in a reduction in demand for Bitcoin, which could have a negative impact on the price of Bitcoin and Bitcoin Futures and thus a negative impact on the performance of the Fund.

Ether Futures Risks. Ether Futures expose the Fund to the following risks:

● Ether and Ether Futures are relatively new assets and ether and the Ethereum network are subject to rapid changes, uncertainty and regulation that may adversely affect the value of Ether Futures or the nature of an investment in the Fund, and may adversely affect the ability of the Fund to buy and sell Ether Futures or achieve its investment objective.

● Historically, ether and Ether Futures have been subject to significant price volatility. The price of Ether Futures may differ significantly from the spot price of ether and changes in the price of Ether Futures may happen rapidly and without notice.

● The market for Ether Futures is less developed than older, more established futures markets (such as corn or wheat futures) and may be more volatile and less liquid than other futures markets. Although this market has grown since Ether Futures were initially developed, there is no guarantee that the market will continue to develop in ways that support the continued growth and operation of the Fund.

The value of ether depends on the development and acceptance of the Ethereum network. The slowing or stopping of the development or acceptance of the Ethereum network may adversely affect an investment in the Fund.

New competing digital assets may pose a challenge to ether's current market position, resulting in a reduction in demand for ether, which could have a negative impact on the price of ether and Ether Futures, and thus a negative impact on the performance of the Fund.

Blockchain, Digital Asset, Technology and FinTech Companies Risk. Companies that are developing financial technologies that seek to disrupt or displace established financial institutions generally face competition from much larger and more established firms. Such companies may not be able to capitalize on their disruptive technologies if they face political and/or legal attacks from competitors, industry groups or local and national governments.

Liquidity Risk. Liquidity risk is the risk that the Fund might not be able to sell an investment without significantly changing the value of the investment on the Fund's books. Liquidity risk can be elevated by market disruptions or volatility, and during these periods, it may be difficult or impossible for the Fund to buy or sell an investment, including in Bitcoin Futures, at a desired price.

Derivatives Risk. The Fund's use of derivatives (in the form of Bitcoin Futures) presents risks different than investing directly in traditional securities. Using derivatives can lead to losses because of adverse movements in the price or value of the underlying reference asset, which may be magnified by features of the derivatives.

Credit Risk. Bonds are subject to credit risk, which is the possibility that the issuer or guarantor of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt or to otherwise honor its obligations and/or default completely. Debt securities, including bonds, are also subject to interest rate risk. Interest Rate Risk. Debt securities, including bonds, are also subject to interest rate risk. Interest rate risk refers to fluctuations in the value of a bond resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most debt securities go down. When the general level of interest rates goes down, the prices of most debt securities go up. Rising interest rates increases the potential for periods of volatility and increased redemptions.

New Fund Risk. The Fund is a newly organized, non-diversified management investment company with no operating history. There can be no assurance that the Fund will grow to or maintain an economically viable size, or that an active trading market for the Fund's shares will develop or be maintained.
